

# Cervical Screening is Improving

Saskatchewan is introducing **combined Pap and HPV testing** to support more accurate testing and safer follow-up care.

Scan here for more detailed info about the changes to cervical screening

## How is my Pap Test improving?

### It's **more accurate.**

Screening can more accurately predict which cervical cell changes are likely to develop into cancer.

### It's **even safer.**

Improved testing more accurately guides follow-up care and treatment. Fewer people will have unnecessary treatment.

### Only **one exam.**

Just as before, your health-care provider will collect a Pap sample. This sample will be used for your Pap test. Depending on the results and your age, the lab will test for high-risk HPV using the same sample.
